

IN THE CLAIMS:

No amendments are being made to the claims; however, the claims as pending are provided below for the Examiner's convenience.

1-23. (Canceled)

24. (Previously Presented) A video print system comprising:  
a storage medium for storing plural image information and plural time information respectively concerning the plural image information;  
setting means for setting a predetermined period;  
reading means for reading from said storage medium the image information including a time indicated by the time information, during the predetermined period set by said setting means; and  
print means for printing an image based on the image information read by said reading means.

25. (Previously Presented) A video print system according to Claim 24, wherein size information for specifying a print size is attached to each of the plural image information, and said print means prints the image with the print size according to the size information attached to the image information read by said reading means.

26. (Previously Presented) A video print system according to Claim 24, wherein said storage medium is a tape-shaped storage medium.

27. (Previously Presented) A print instruction method comprising:  
a setting step of setting a predetermined period;

a reading step of reading, from a storage medium storing plural image information and plural time information respectively concerning the plural image information, the image information including a time indicated by the time information, during the predetermined period set in said setting step;

a print instruction step of instructing image printing based on the image information read in said reading step.

28. (Previously Presented) A print instruction method according to Claim 27, wherein size information for specifying a print size is attached to each of the plural image information, and the image printing is performed with the print size according to the size information attached to the image information read in said reading step.

29. (Previously Presented) A print instruction method according to Claim 28, wherein the storage medium is a tape-shaped storage medium.

30. (Previously Presented) A recording medium on which a program to execute a print instruction method is recorded, said method comprising:

a setting step of setting a predetermined period;

a reading step of reading, from a storage medium storing plural image information and plural time information respectively concerning the plural image information, the image information including a time indicated by the time information, during the predetermined period set in said setting step; and

a print instruction step of instructing image printing based on the image information read in said reading step.

31. (Previously Presented) A program to execute a print instruction method, comprising:

- a setting module for setting a predetermined period;
- a reading module for reading, from a storage medium storing plural image information and plural time information respectively concerning the plural image information, the image information including a time indicated by the time information, during the predetermined period set by said setting module; and
- a print instruction module for instructing image printing based on the image information read by said reading module.

32. (Previously Presented) A print instruction apparatus comprising:

- setting means for setting a predetermined period; and
- print instruction means for instructing to print, from a storage medium storing plural image information and plural time information respectively concerning the plural image information, the image information including a time indicated by the time information, during the predetermined period set by said setting means.

33. (Previously Presented) A print instruction apparatus according to Claim 32, further comprising:

- connection means for connecting said apparatus to a printer through a data bus; and
- reading means for reading the image information print-instructed by said print instruction means from said storage medium,

wherein the image information read by said reading means is sent to the data bus.

34. (Previously Presented) A print instruction apparatus according to Claim 32, wherein size information for specifying a print size is attached to each of the plural image

information, and the image printing is performed with the print size according to the size information attached to the image information read by said reading means.

35. (Previously Presented) A print instruction apparatus according to Claim 32, wherein said storage medium is a tape-shaped storage medium.

36. (Previously Presented) A print instruction method of a print instruction apparatus, comprising:

a setting step of setting a predetermined period; and

a print instruction step of instructing to print, from a storage medium storing plural image information and plural time information respectively concerning the plural image information, the image information including a time indicated by the time information, during the predetermined period set in said setting step.

37. (Previously Presented) A print instruction method according to Claim 36, further comprising:

a connecting step of connecting the print instruction apparatus to a printer through a data bus; and

a reading step of reading the image information print-instructed in said print instruction step from the storage medium,

wherein the image information read in said reading step is sent to the data bus.

38. (Previously Presented) A print instruction method according to Claim 37, wherein size information for specifying a print size is attached to each of the plural image information, and the image printing is performed with the print size according to the size information attached to the image information read in said reading step.

39. (Previously Presented) A print instruction method according to Claim 36, wherein the storage medium is a tape-shaped storage medium.

40. (Previously Presented) A recording medium on which a program to execute a print instruction method is recorded, said method comprising:

a setting step of setting a predetermined period; and

a print instruction step of instructing to print, from a storage medium storing plural image information and plural time information respectively concerning the plural image information, the image information including a time indicated by the time information, during the predetermined period set in said setting step.

41. (Previously Presented) A program to execute a print instruction method, comprising:

a setting module for setting a predetermined period; and

a print instruction module for instructing to print, from a storage medium storing plural image information and plural time information respectively concerning the plural image information, the image information including a time indicated by the time information, during the predetermined period set by said setting module.
